

Diameter AI Innovation Belt

Urban Design Proposal for Centennial Jingzhang AI Innovation Belt

Submitter	PKU-FranklinWang
Package Type	Professional Design Package
Version	v5.11.0
Date	2026-09-04
Location	Haidian District, Beijing

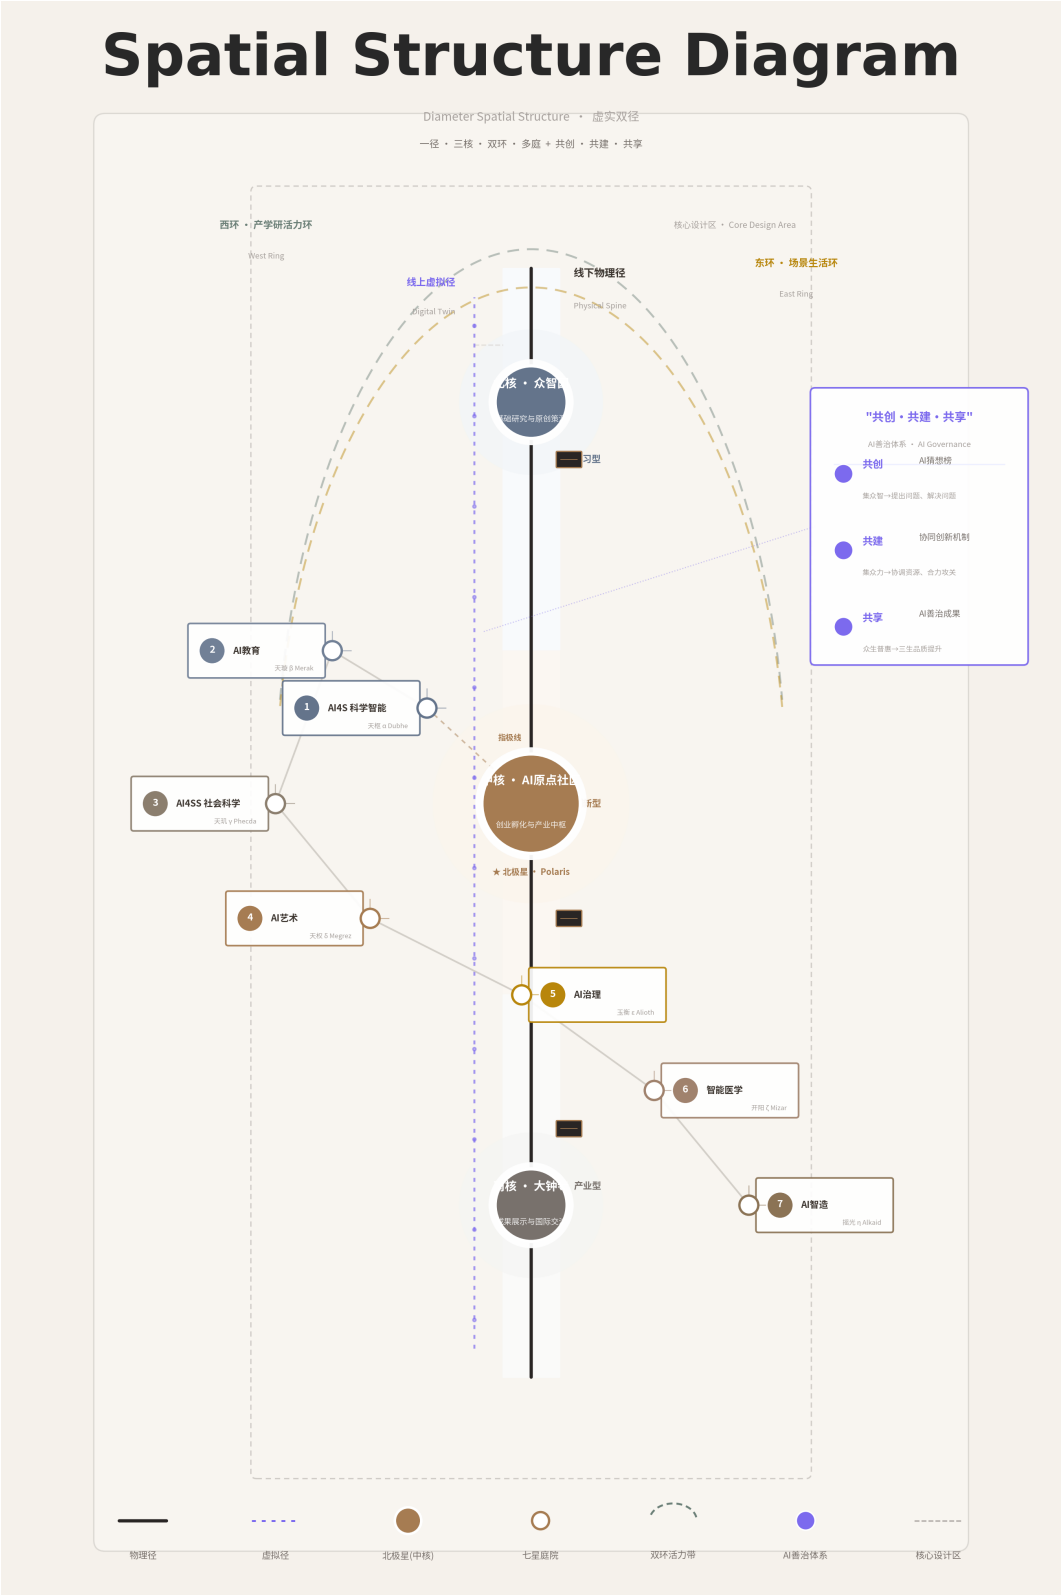

PROVISIONAL — AI-Generated Conceptual Proposal. For Discussion Only. Not for Construction.

1. Core Concept & Spatial Structure

The proposal takes Diametric as its core concept, elevating the Jingzhang Railway Heritage Park from a linear green belt into the Jingzhang Innovation Diameter — a sci-tech innovation axis in western Beijing echoing the traditional ritual axis in the east, together forming Beijing's dual-axis pattern: one ancient, one modern; one cultural, one technological. The core philosophy is One Vein · Three Qualities · Seven Dimensions:

One Vein — Century-long Jingzhang spirit of indigenous innovation. Three Qualities — Green-smart urban quality revolution: green as foundation, smart as soul, resilient as base. Seven Dimensions — Ecology, livability, learning, innovation, culture, mobility, governance.

Figure 1. Diametric Spatial Structure

Spatial Structure: One Diameter · Three Cores · Two Rings · Multi-Yards

- One Diameter — 9km north-south spine integrating walking, cycling, and innovation exchange.
- Three Cores — Zhongzhi Garden (North · Source Innovation), AI Origin (Central · Talent Vitality), Dazhongsi (South · Industry Transfer).
- Two Rings — West Ring (Industry-University-Research Vitality) + East Ring (Scenario Living), symmetrically distributed.
- Multi-Yards — Innovation courtyards along the diameter creating diverse innovation micro-spaces.

2. Three Key Area Detailed Designs

Figure 2. Three Key Areas

A1 Zhongzhi Garden — AI Indigenous Innovation Accelerator (192.1 ha)

Positioning: Core carrier of full-stack AI indigenous innovation; first station for university tech transfer. Low-density, garden-style innovation park with research platforms, incubation systems, industry-university-research zones, and young scientist communities.

A2 Beijing AI Origin Community (104.3 ha, Wudaokou + Zhichunlu)

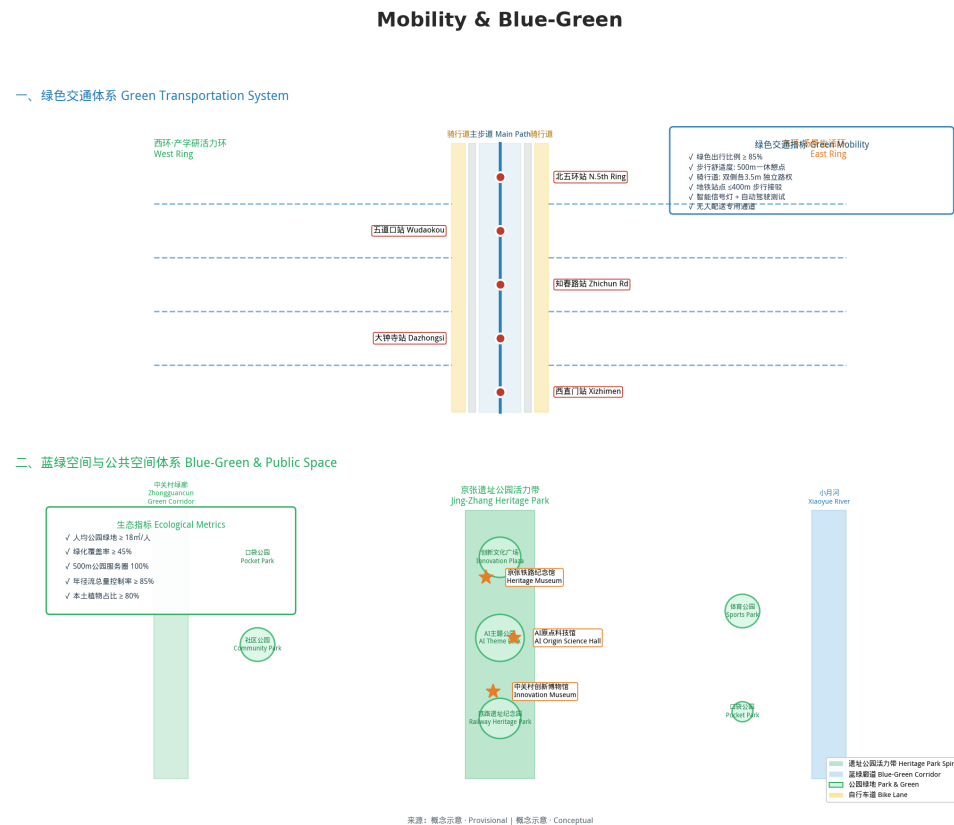

Positioning: Core of AI tech source and talent vitality; energy hub of the innovation diameter. High-intensity, high-density, high-mix urban core with 24-hour vibrant blocks and 3D pedestrian systems connecting metro, commerce, offices, and residences.

A3 Dazhongsi AI Industry Cluster (72.0 ha)

Positioning: Gateway for AI industry implementation and application promotion. Landmark architecture, AI enterprise headquarters, AI+ solution centers, and efficient transport links.

3. Mobility, Slow Traffic & Blue-Green Space System

Figure 3. Mobility & Blue-Green Space

Green Transportation System

- Build a "transit-led, slow-traffic priority, smart-enabled" green transport system, green travel $\geq 85\%$.
- Construct running paths, bike lanes, promenades, and green landscapes along the heritage park.
- An east-west slow-traffic corridor every 500m to stitch spaces on both sides of the railway.
- Intelligent signal systems, autonomous driving test roads, unmanned delivery lanes.

Blue-Green Ecological Pattern

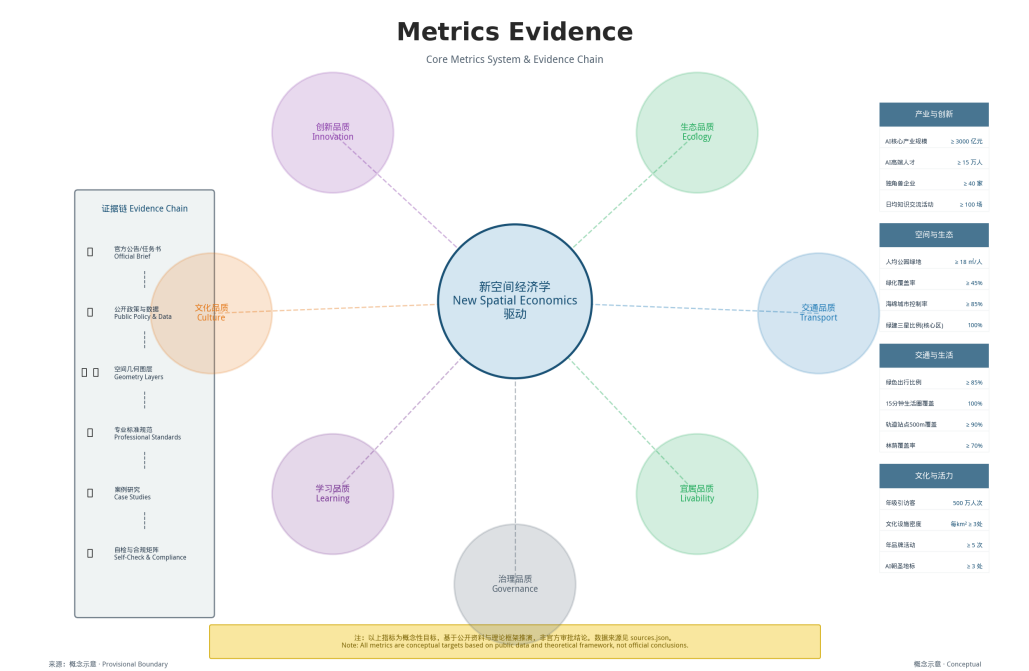

- "One spine, three corridors, multiple nodes": heritage park green spine + 3 north-south ecological corridors.
- Per capita park green space $\geq 18 \text{ m}^2$; 100% coverage of parks within 500m radius.
- Sponge city with annual runoff control rate $\geq 85\%$.
- 100% of core buildings meet 2-star green building standard; core area 100% 3-star.

4. AI Innovation Ecosystem & Key Metrics

AI+ Scenario System (≥10 Scenario Cards)

Scenario	Type	Location
AI+ Smart Mobility (signal opt / autonomous)	Transport Test	AI Origin Corridor
AI+ Healthcare (diagnosis / telemedicine)	Public Service	East Wing Life Sci Park
AI+ Education (personalized / AI tutors)	Public Service	Xueyuanlu Univ Belt
AI+ Urban Governance (CIM / command center)	Governance Test	Smart City Ops Ctr
AI+ Creative Design (AIGC / metaverse)	Creative Industry	Dazhongsi Creative Zone
AI+ Finance (advisory / risk control)	Professional Svc	Zhongguancun Corridor
AI+ Energy (smart grid / DR)	Infrastructure	Distributed Along Belt
AI+ Unmanned Delivery (last-mile / robots)	Industry Test	Within Key Areas
AI+ Public Art (interactive / digital)	Cultural Exp.	Heritage Park Corridor
AI+ Community Svc (smart hub / retail)	Life Services	Talent Communities

Figure 4. Core Metrics System

5. Implementation Path & Operation Mechanism

Phased Implementation Plan

Phase	Timeframe	Key Tasks
Initiation	2026-2027	Lay foundation, establish image, produce prototypes - Overall urban design & regulatory planning - Full heritage park connection - First infrastructure batch
Acceleration	2028-2029	Scale up, gather talent, demonstrate results - Core areas basically completed - Attract AI leaders and top talent - Smart city system goes live
Maturity	2030+	Set benchmarks, form paradigms, enable replication - World-class AI innovation belt complete - Replicable Haidian model established - Drive Jing-Jin-Ji coordinated dev.

Governance & Operation Innovation

- Localized BID Model: AI Innovation District Development Council with enterprise, university, and community reps.
- Tripartite Operation: Government guidance + market operation + social participation.
- National System & Market Balance: Forward planning + institutional pilot + long-term strategic focus.
- Innovation Promotion Fund: Enterprise fees managed autonomously by the Council.
- Global AI Event System: Jingzhang AI Festival, Zhongguancun Entrepreneurship Week, Open Source DevCon.
